

Leppington lead-ins for wastewater infrastructure

We have recently completed construction of lead-in mains to connect to trunk mains in Leppington.

About the project

Typically, Sydney Water delivers trunk infrastructure and lead-ins are delivered by developers. In the case of Leppington North, accelerated delivery of wastewater lead-in mains within the area is required. Sydney Water has therefore carried out the detailed design and delivery of this lead-in infrastructure.

The project has recently been completed, and has been delivered in stages.

- 10 wastewater infrastructure lead-ins to connect to the existing trunk mains, totalling 5.5km of pipe

What we've done

We've completed construction of 5.5 kilometres of lead-in mains to connect into trunk mains in Leppington.

Lead-ins were located on Fifth Avenue, Kelly Street, Cowpasture Road, Camden Valley Way and Ingleburn Road crossing.

How do I connect to the wastewater system?

If you'd like to connect to our water or wastewater system, you'll need to engage a [Water Servicing Coordinator](#) or apply directly through Sydney Water Developer Direct.

A Water Servicing Coordinator can help you with your application to adjust, extend or connect into our pipes. Coordinators can answer questions about your application on our behalf and can also facilitate the project management, design and construction of any required work. They're not employed by Sydney Water.

If water and wastewater services are available to your property and you have a small to medium development or minor sewer works, you will need to get a Section 73 Certificate. You can use a Water Servicing Coordinator or apply directly to us online through [Sydney Water Developer Direct™](#).
